

SHUBHAM KANSE

Software Engineer

Galway, Ireland | +353 899775080 | shubham.kanse@hotmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

AI-focused Software Engineer with 3.5+ years delivering secure, scalable backend systems across FinTech and cloud-native platforms. Proven expertise in Java, Spring Boot, AWS, and distributed systems with direct impact on platforms processing over 5M daily transactions. Adept at building AI-integrated microservices and event directed architectures using Kafka, OAuth2, and REST APIs. Recent graduate in MSc in AI with NLP and ML specialization. Recognized for cutting latency by 75%, mentoring global Agile teams, and architecting APIs adopted by 40% more clients. Passionate about developing intelligent systems that enhance user interaction, platform efficiency, and enterprise scalability.

TECHNICAL SKILLS

Core Languages:	Java, Python, SQL, C++, C#
Backend & APIs:	Spring Boot, REST, OAuth2, JWT, GraphQL
Cloud Platforms:	AWS, Azure
Distributed Systems:	Kafka, Event-Driven Architecture, Cafex
CI/CD & DevOps:	Jenkins, GitLab CI, Docker, Ansible, Rundeck
Monitoring & Observability:	Splunk, AppDynamics, Apigee
Security & Testing:	Secure SDLC, TLS, SAST/DAST, JUnit, Mockito, TestContainers, TDD, BDD
AI/ML/NLP:	Scikit-Learn, FastAPI, Sentiment Analysis, Multi-Agent Systems
Practices:	Agile, Scrum, API Gateway Policies, Code Reviews

PROFESSIONAL EXPERIENCE

Sr. Associate, Software Development Engineering

Fiserv | May 2021 – July 2024

Cloud-Native Microservices & Platform Engineering

- Developed and deployed Java/Spring Boot microservices handling 5M+ daily financial transactions with 98% uptime using distributed messaging and OAuth2-secured interfaces.
- Refactored synchronous MQ architecture into HTTP-based Cafex flows, lowering inter-service latency by 75% and improving system throughput by 60% within 6 months.

API Engineering & Secure Integrations

- Developed 50+ OpenAPI-documented REST APIs secured via OAuth2 and JWT, maintaining <0.5% post-deployment errors and cutting partner onboarding time by 20%.
- Enabled third-party client integrations, resulting in 40% increase in service adoption across partner ecosystems within 9 months.

CI/CD Automation & Infrastructure Optimization

- Engineered Jenkins/GitLab pipelines integrated with Docker and Ansible to automate deployment processes, taking down average deployment time from 2 hours to 30 minutes.
- Implemented self-service infrastructure provisioning via Rundeck and Ansible, enhancing team autonomy and tripling release frequency.

Operational Excellence & Observability

- Facilitated in designing real-time dashboards and alerting systems using Splunk, AppDynamics, and Apigee, shifting MTTR from 4 hours to under 1 hour.
- Produced service monitors, auto-scalers, and health checks supporting four high-availability production environments.

Security & Agile Collaboration

- Integrated SAST/DAST into Agile pipelines and enforced TLS, reducing codebase vulnerabilities by 35% while maintaining SDLC velocity.
- Executed cross-functional secure code reviews and architectural threat modeling sessions.

Leadership & Mentorship

- Mentored 2 junior engineers in test-driven development and modular design, increasing test coverage by 40% and reducing regressions by 35%.
- Led code review initiatives, improving sprint delivery rate and code quality KPIs across teams.

Software Engineering Intern – Java Developer

Digitech Controls & Systems | September 2019 – October 2019

- Built RESTful APIs and SQL-backed services using Core Java and JUnit/Mockito, achieving 80% unit test coverage.
- Delivered CI-ready features and collaborated in Agile development ceremonies.

EDUCATION

MSc in Computer Science – Artificial Intelligence

University of Galway, Ireland | September 2024 – August 2025

Thesis: “Online Misogyny Detection using API-Based Auto Augmentation”

Technologies: BERT, ELECTRA, FastAPI, NLP

BE in Electronics & Telecommunication

Pune Institute of Computer Technology, India | August 2016 – October 2020

PROJECTS

Payment Gateway Backend System

Java, Spring Boot, OAuth2, Microservices

Simulated secure transaction workflows across banks and vendors using modular microservices; demonstrated orchestration, validation, and compliance under PCI principles.

Movie Recommendation System

Python, NLP, Sentiment Analysis

Built ML powered recommender engine using sentiment analysis and NLP to generate personalized user suggestions based on reviews and preference signals.
